

# Press Release

June 6, 2012

**On Thursday June 6th 2012 the FAA Aircraft Certification Office approved J. L. OSBORNE's Gross Weight Increase (GWI) Supplemental Type Certificate (STC) for all Hawker Beechcraft Bonanza 36 series (excluding B36TC)**

## **J. L. OSBORNE now with highest Gross Weight Increase**

OSBORNE holds the highest GWI STC available on the market for the Bonanza 36 models. When considering the increased empty weight airframes due to additional factory equipment and after market modifications, resulting in reduced useful load margins. This STC's higher GWI substantially offsets this shortage.

By means of OSBORNE's FAA Approved GWI to 4,024 lbs. supplements the Bonanza's factory gross weight (GW) of 3,600 and 3,650 lbs., allowing for an additional 424/374 lbs. respectively.

OSBORNE's GWI STC also features the highest landing weight at 4,024 lbs.

Utility Category operation is available at or below factory gross weight and tip tanks empty.

GWI features offer an increase in useful load with or without fuel in OSBORNE Tip Tanks. This STC addition also includes the largest (area) weight and balance loading graph.

The only requirements for this STC is installation of OSBORNE Tip Tank Kit, it's Operation Placard, replacement of existing Tip Tank kit POHS and FAA approved 300 HP engine (factory or after market).

No further parts or expensive modification(s) to procure and install are required for OSBORNE's new GWI STC.

Contact J. L. OSBORNE's Sales/Tech departments at 800.963.8477 for further questions.
